## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2, 5, 6 and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Hutter 4,338,151. See column 7, line 3 through column 8, line 26 and Figures 17-19, 21 and 22. The flange 67 is capable of engaging the top of flange 68 if pushed far enough, e.g. before attachment of the apparatus to a substrate. The threads 77 may be considered beveled edges on the inner retainer.
3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hutter 4,822,656. See Figures 4 and 5, and column 6, lines 5-41. Spokes 28, 30 in the reference's article may be considered the biasing means and also a stop projecting radially outward from the inner retainer 26 since it applies a downward force when the apparatus is in the second position.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hutter ('656) in view of Hutter ('151). The primary reference discloses the invention substantially as claimed; see See Figures 4 and 5, and column 6, lines 5-41. However it does not disclose a stop radially projecting out from the inner retainer. The secondary reference discloses a stop (flange 67) extending out from an inner retainer which aids to handling the apparatus; see column 8, lines 1-3. It would have been obvious to one of ordinary skill in the art to provide a flange on the inner retainer of the article of the primary reference in view of the teachings in the secondary reference in order to facilitate handling of the apparatus. Such a flange would be capable of contacting the top of the outer part of the apparatus.
